

The Irish Talent Collective

Across Ireland, ambitious students already meet through programmes such as the Stripe Young Scientist, SciFest, PATCH OpenAI Builders Week, Teen-Turn, TECS and many others. The same young people often cross paths again and again, but those connections are usually tied to the individual programme or event.

THE IDEA

Create one place where ambitious young people across Ireland can find each other, see what others are building, form teams and keep collaborating long after an individual competition or programme ends.

WHAT IT COULD BECOME

A CONNECTED NETWORK

A place for students to share what they are working on, find collaborators and discover other young builders around Ireland.

A STUDENT DIRECTORY

Profiles built around interests, projects and skills, making it easier to find the right person to start something with.

MEETUPS + NATIONAL EVENTS

Regular opportunities to meet in person, alongside major student-led events that bring the wider network together.

THE DUBLIN HACKATHON

Innovation Ireland and Dublin Tech Circuit are now working together on a major student hackathon at Dogpatch Labs in Dublin, planned for the end of November or start of December. We are aiming to bring 150-200 secondary school students from across Ireland together for a full day of building. The event is intended to strengthen the connections between young builders nationally and create something that continues beyond a single day.

For partners, this means support can go beyond one event. There is an opportunity to help build the infrastructure that connects Ireland's next generation of engineers, researchers, founders, designers and technologists.

WHO WE ARE BUILDING WITH

Innovation Ireland x Dublin Tech Circuit

The Dublin event is being organised together by Innovation Ireland and Dublin Tech Circuit, two student-led communities built around the same basic belief: young people should have somewhere to meet, build and take technology seriously outside the classroom.

DUBLIN TECH CIRCUIT

"Just like every school in Ireland has a GAA team, it's time for schools to have a tech team."

Dublin Tech Circuit is a student-led community of technology enthusiasts focused on peer-to-peer learning, intra-school collaboration and inter-school competition across technology. It gives students a structure to build together, represent their schools and meet other technically ambitious young people.

TWO COMMUNITIES, ONE NATIONAL EVENT

INNOVATION IRELAND	DUBLIN TECH CIRCUIT
A nonprofit youth technology community with 100+ young people, local communities around Ireland, regular build sessions, hackathons and student-led projects.	A student-led technology community built around peer learning, school tech teams, collaboration and competition between young technologists.

THE TEAM

The collaboration is being led by Johnathan McPhilbin, founder of Innovation Ireland, and Arjun Gambhir, founder of Dublin Tech Circuit. Both were part of PATCH 2025 and have experience building student-led technology communities and events in Ireland.

WHY THIS MATTERS FOR PARTNERS

Supporting the Dublin event means supporting two existing student-led communities coming together to create a stronger national network. Partners can contribute funding, mentors, speakers, food, travel support, prizes, hardware, software credits or longer-term opportunities for young builders.

SPONSORSHIP OPTIONS

Pick the way you want to get involved.

We have deliberately kept the packages accessible. Cash and in-kind support are both greatly appreciated, and we are happy to shape involvement around what makes sense for your organisation.

SUPPORTER	€250	Logo on the event website/materials, event acknowledgement, and the option to provide swag or prizes.
EVENT PARTNER	€750	Stronger event branding, company mentors, event acknowledgement and the option to have a presence on the day.
SPONSORED PRIZE	€1,000	Back your own named prize or challenge. Help shape the criteria and, where useful, provide relevant mentors. Can also be equivalent in-kind value.
MAJOR PARTNER	€1,500+	Prominent branding, meaningful event presence, mentors, opening/closing acknowledgement and potential speaker involvement where relevant.

IN-KIND SPONSORSHIP

We would especially love to hear from organisations able to cover or contribute toward 200 custom T-shirts, food, prizes, printing/signage, hardware, developer credits, merchandise or event equipment. In-kind support can be recognised in the same spirit as cash sponsorship based on its value and impact.

Want to help make it happen?

We would love to talk about sponsorship, an in-kind contribution, a sponsored prize, mentors, speakers or another way your organisation could support the event.

Johnathan McPhilbin | Innovation Ireland

Arjun Gambhir | Dublin Tech Circuit

Help us build a huge day for young people in tech.

This December, we are bringing around 150 secondary school students from across Ireland together in Dublin for a full day of building ambitious technology projects. Sponsorship goes directly into making the day accessible, memorable and genuinely valuable for the students.

~150 students	~50 organisers + mentors	200 event T-shirts planned	DECEMBER Dublin
---------------	--------------------------	----------------------------	--------------------

WHAT THE EVENT NEEDS

FOOD + DRINKS	up to €3,000	Our largest core cost: roughly €20 per student for food and drinks across the day.
CUSTOM EVENT T-SHIRTS	200 shirts	A shirt for every student plus organisers, mentors and volunteers. A strong standalone in-kind sponsorship opportunity.
PRIZES	flexible	Meaningful prizes for the strongest and most interesting projects, including sponsor-backed category prizes.
BRANDING + PRINT	flexible	Posters, signage, badges, table branding, printed materials and other physical event identity.
EVENT EXTRAS	flexible	Swag, hardware, developer credits, equipment and anything else that improves what students can build or take home.

OUR GOAL: Cover the practical cost of the event first, then use additional support to make the student experience better - stronger prizes, better equipment, more useful swag and future Innovation Ireland opportunities.
