

Why partner with Innovation Ireland?

A partnership is more than putting a logo on an event. It is a chance to support ambitious young builders early, strengthen Ireland's future technology community and show meaningful investment in young people.

SUPPORT THE PEOPLE WHO MAY BUILD IRELAND'S NEXT COMPANIES, PRODUCTS AND TECHNOLOGY TEAMS.

Innovation Ireland gives secondary school students places to build, meet each other and learn by actually making things.

THE VALUE FOR PARTNERS

FUTURE WORKFORCE

Meet and support technically curious students years before traditional graduate recruitment begins. The goal is not immediate hiring; it is building familiarity and goodwill with the next generation of engineers, founders and makers.

VISIBLE, POSITIVE IMPACT

Supporting free or accessible youth technology programmes gives a company a concrete story to tell employees, customers and the wider community: your organisation helped young people build real things.

EARLY BRAND AFFINITY

Students remember the organisations that gave them hardware, mentors, food, prizes, project funding or simply a place to build. Useful support creates a much stronger impression than ordinary advertising.

EMPLOYEE ENGAGEMENT

Engineers, designers and founders can participate as mentors or speakers. It gives staff a practical way to share expertise and see the direct result of the company's support.

ACCESS TO A GROWING COMMUNITY

A long-term partnership can extend beyond one event into local Innovation Ireland branches, future hackathons, workshops, student projects and national programmes.

BETTER THAN PASSIVE BRANDING

We want partners involved in ways students can actually feel: a project prize, shirts, hardware, developer credits, workshops, mentors or equipment - not simply a logo on a banner.

Help build the ecosystem, not just one event.

The strongest partnership is one that grows with the community. Innovation Ireland can work with companies on practical ways to support young builders throughout the year.

STUDENT PROJECTS	Project grants, components, hardware, software and credits that let students turn ideas into real builds.
LOCAL BRANCHES	Support recurring youth technology communities and give students somewhere to keep building after an event ends.
NATIONAL EVENTS	Help make larger hackathons, showcases and workshops accessible to students from around Ireland.
PEOPLE	Provide mentors and speakers who can give students useful technical feedback and a realistic view of careers and entrepreneurship.
OPPORTUNITY	Where appropriate, create future pathways into work experience, visits, workshops and other age-appropriate opportunities.

A NOTE ON TAX

There may be tax advantages depending on how a partnership is structured, but we would never present sponsorship as automatically tax-deductible. In Ireland, ordinary business expenditure can generally be deductible where it is incurred wholly and exclusively for the purposes of the trade. Separately, qualifying company donations to Revenue-approved bodies can receive charitable donation relief, subject to the statutory conditions. The correct treatment depends on the sponsor, the nature of the payment and Innovation Ireland's applicable status, so partners should confirm treatment with their own tax adviser.

This document is not tax advice. We can provide the relevant organisational and payment information a sponsor's finance team needs to assess the position.

INTERESTED IN HACK CLUB TOO?

Johnathan is currently working with Hack Club through its Gap Year programme. If a partner is interested in exploring a broader relationship with Hack Club, he can make an introduction to the appropriate Hack Club team. Any Hack Club partnership would be discussed and agreed directly with Hack Club.

Partner early. Grow with us.
